

The growth down the market outlook rubber industry to lead?

Reuters – Rubber in China since the beginning of this year, China's natural rubber prices continued lower volatility, slowing of the growth of the economic indicators of the rubber industry, the significant downturn in export growth, the narrowing of the efficiency of the sector indicators, high product inventory. In this situation, how the fourth quarter of this year, and the trend of the development of the rubber industry in China next year? China Rubber Industry Association, will be held in Hangzhou on October 26, 2012 the national rubber industry information conference on these issues will be a detailed analysis and interpretation.

Compared with foreign advanced technology, China's rubber industry there is a larger gap in the degree of automation, energy saving and environmental protection technology, to solve the problems in the development of these industries must rely on high technology to transform traditional rubber industry. "Accelerate the application of new technologies to achieve the transformation and development forum held in the same period, many practical solutions will bring the majority of rubber enterprises. The forum theme: technological innovation, energy conservation, quality and efficiency.

The meeting invitation is a spokesman for the industry heavyweights, the speeches closely linked to the current industry hot. Speak mainly divided into two parts: First, industry information release, major release this year, the economic operation of the rubber industry and two months of this year and next year's market trend forecasts, key market analysis and forecasting; Second, is the theme of the forum, the main Introduction of the latest high-tech domestic industrialization, promote the rubber industry to speed up high-tech application, product structure adjustment and transformation and upgrading, and enhance their market competitiveness.

Part of the information released, TANG Ngar Li, Secretary-General of the China Rubber Industry Association, will focus on the operation of the rubber industry in China in 2012, and the market outlook, the development of analysis and outlook. September this year, the tires safeguard expires and is not extended, China's tire exports much good will it bring what worries? How the tire should regulate the export and avoid trade friction? EU tire labeling law is to be implemented, and what impact will China's tire exports? Enterprises how to break through technical barriers abroad? Hangzhou Zhongce Rubber Co., Ltd. Chairman Chen Jinrong analysis will focus on "special protection era of Chinese tire export market." EU tire labeling law had not yet been formally implemented, vehicle matching the the intelligent tire and put on the agenda, the

EU recently held international Intelligent Tire Technology Seminar upload EU tire companies with OEMs and Automatic Instrument Factory joint development of supporting intelligent tire, is bound to affect the structure of the replacement tire market, when China's tire exports to the EU will be brought to what effect? Hong Kong Applied Technology Research Institute the Dr. Shen Wenlong will introduce international Intelligent Tire Technology Seminar content, and do the development and challenges of the intelligent tire report. Green tires undoubtedly has become the development direction of the tire industry, and on the rubber material, higher demands, and the technological progress of the rubber material will also promote the process of green tires, Lanxess, Germany, the world's largest synthetic rubber producers at the meeting introduce the international rubber new material development situation, and their contribution will be made of green rubber industry.

In addition, the production and operation of the tire, hose tape, the non-tire rubber products, cycle tire, latex, rubber chemicals, skeleton material, waste rubber utilization and carbon black industry since the beginning of this year, as well as the market outlook analysis are included to information Proceedings of the conference will provide the majority of delegates authority market information.

Part of the restructuring and development of new technology applications Forum, Wang Li, deputy director of the Science and Technology Department of Zhejiang Province, will do "science and technology innovation and development," the report; Oaks Association, Fan Rende's report is "full use of high technology to transform traditional rubber industry, building the world rubber industry power. " Common problem in China's tire plant design, Guilin Rubber Design Institute Co., Ltd., general manager Jiang Jianping based on practical experience of the company, a detailed analysis of the gap between of tire enterprises at home and abroad in the design of energy-saving, tire factory and highlights new energy saving design ideas and practical results. The development of rail transportation in the country with each passing day, the increasing requirements of the new rubber material, what new rubber material used in the field of rail transportation, technology and innovation to drive enterprise development, Zhuzhou Times New Material Technology Co., Ltd., Yang Jun the introduced polymer materials innovation and application in the field of rail transport, and to share the results of their development and experience. Current domestic rubber enterprise's production processes and equipment is the level of automation, the largest gap with foreign, and a large number of foreign advanced factory robots application, nobody workshop abound reduced equipment efficiency, robotics applications, and mechatronics with foreign the gap between the leading enterprises of China's rubber machinery control Soft Corporation executive vice president Wang Jinjian will introduce to the rubber equipment Mechatronics help companies energy efficiency. Supporting industries as automobile, work closely with OEMs, intervention from the research and development stage, the only way is more efficient development of rubber products, Rubber Products Co.,

Ltd. Deputy General Manager of Baoding Noble Yong-Jun Yang describes Noble rubber with Great Wall Motor to synchronize product development . In addition, it is indeed as Que Weidong, general manager of Silicon Chemical Co., Ltd. will introduce the oligomeric highly dispersed silicon dioxide (silica) Emerson Process Management Limited product manager Baixiu Qi will introduce the tire business of Emerson technology to boost energy conservation increase in green tire; efficiency; Solar Turbines International Sales Manager Hu Jize describes how to enhance the efficiency of the system through state-of-the-art gas turbine generator sets, and energy conservation.

The meeting will also make arrangements for key business representatives the Hangzhou Zhongce Aeolus Tyre, Double Coin tires, Tianjin Wanda Tyre, Tianjin Comay etc. to introduce the company's achievements in energy conservation, product structure adjustment and experience.

The morning of October 27, the conference will also organize on behalf of visit: Zhongce Rubber Co., Ltd. in Hangzhou, Zhejiang Double Arrow Rubber Co., Ltd., Zhejiang Lianhang tire City Management Co., Ltd., the KraussMaffei Berstorff company, Zhejiang three Guinness Rubber Co., Ltd..

“2012 national rubber industry conference cum accelerate the application of new technologies to achieve transformation development forum to be convened, the conference will bring a wealth of information and authoritative analysis of the majority of rubber enterprises, not to be missed.
